

## TERMS OF REFERENCE FOR INDIVIDUAL CONSULTANTS AND CONTRACTORS

|  |   |  |   |
|--|---|--|---|
| <b>TITLE:</b><br><br>National Consultant: Scaling up the Integrated Management of Acute Malnutrition (IMAM) Program in the context of Covid-19 pandemic  | <b>FUNDING CODE (WBS AND GRANT/FUND ID)</b> | <b>TYPE OF ENGAGEMENT:</b><br><br><input type="checkbox"/> Individual Consultant (ZCON)<br><input type="checkbox"/> Individual Contractor Part-Time<br><input checked="" type="checkbox"/> Individual Contractor Full-Time | <b>DUTY STATION:</b><br>South Sulawesi Province<br><br><b>DURATION:</b><br>1 March 2022 – 31 January 2023 (11 months) |
| <b>PURPOSE OF ACTIVITY/ASSIGNMENT:</b><br><br>The purpose of this assignment is to support UNICEF and the Province and District Health Offices in scaling up the Integrated Management of Acute Malnutrition (IMAM) program in South Sulawesi Province in the context of COVID-19 pandemic. The consultant is expected to provide solid technical advice and policy advocacy support to the subnational government. The assignment is in line with UNICEF Country Programme Action Plan 2021-2025 to support the following outcome and output area: <ul style="list-style-type: none"> <li>• <b>Outcome 1.1:</b> Women and children have more equitable access to evidence-based nutrition services and adopt appropriate care practices across the life cycle from pregnancy to adolescence.</li> <li>• <b>Output 1.2.</b> Care for Wasted Children</li> </ul>  |   |  |   |
| <b>BACKGROUND:</b><br><br>Wasting is a form of malnutrition characterized by thinness, which affects an estimated 6.2 million children under five years in Indonesia. Indonesia currently has the fourth-highest burden of child wasting in the world with more than 2 million children being severely wasted. Of all forms of child malnutrition, it is the most dangerous type with the highest mortality risk. Specifically, severe wasting increases the risk of death in children up to 12 times and requires treatment to restore metabolic functions and regain body weight. The Government of Indonesia has expressed a strong commitment to address child wasting and included wasting as one of the main development indicators in the National Medium-term Development Plan 2020–2024 with a target to reduce wasting prevalence to <7 percent by 2024. However, the disrupted food supply chains, income loss, and reduced access to health services due to COVID-19 has led to further increase in the number of malnourished children in Indonesia.<br><br>To address this challenge, UNICEF has been supporting the national and sub-national government in scaling up the integrated management of acute malnutrition (IMAM), a life-saving program to prevent and treat child wasting, by integrating it within the existing health system. Substantial efforts have been made to support the government in improving the coverage and quality of the IMAM program since 2019, with actions focusing on strengthening mass screening of malnutrition by integrating the mid-upper arm circumference (MUAC) measurement into primary and community healthcare services and introducing various innovative approaches. For instance, UNICEF has promoted a 'family-led MUAC' approach, a home-based MUAC assessment by mothers and caregivers in more than 20 districts, including in selected districts across South Sulawesi Province.<br><br>In 2022 UNICEF will continue to provide intensive technical support to the sub-national government, as more districts are planning to implement the IMAM services. Against this backdrop, UNICEF is seeking a national consultant to support the IMAM program scale-up in South Sulawesi Province.<br><br><b>*Work Assignment Overview (SMART)</b><br><b>Scope of Work:</b><br>The IMAM consultants will facilitate the scale-up of the IMAM program by supporting i) the provincial and district government in IMAM strategy development (planning, budgeting, and implementation), advocacy, coordination, capacity building, and scaling up innovative approaches; and ii) respective local authorities in implementing the IMAM program with quality and coverage.<br>The consultant will be requested to: <ol style="list-style-type: none"> <li>1. Support the institutionalization of IMAM services into existing health systems in South Sulawesi Province</li> </ol> |   |  |   |

2. Support and facilitate the implementation and scale up of family MUAC approach (i.e. program implementation, capacity building, multi-sectoral coordination, data collection, and documentation) in selected districts in South Sulawesi Province
3. Support and facilitate the implementation and scale up of early identification and referral of child wasting in Early Childhood Development (ECD) Centers (i.e. program implementation, capacity building, multi-sectoral coordination, data collection, and documentation) in South Sulawesi Province

The key tasks and indicative timeline are provided below. The timeline can be adjusted in agreement with UNICEF as long as the tasks are completed by 31 January 2023. The tasks will be conducted in close collaboration with the UNICEF Nutrition Team the Field Offices and in Jakarta
