TERMS OF REFERENCE FOR INDIVIDUAL CONSULTANTS

Title:	Гуре of engagement	Duty Station:
Provincial Immunization Consultant (based in	🔀 Consultant	1 person based in Makassar- will cover Central Sulawesi and East Kalimantan
Makassar)		Consultant should be home-based and will not have assigned desk or office space.

Purpose of Activity/Assignment:

The purpose of this consultancy assignment is to provide support and technical assistance to the Government on Routine Immunization in Central Sulawesi and East Kalimantan (two out of the ten high-priority zero dose provinces). The aim is to support accelerating activities to reach zero dose and under immunized children and enhance equitable immunization coverage including new vaccine's introduction in these provinces.

Background:

Indonesia's health system reaches most children in their birth cohort of 4.3 million children a year with vaccines and other health services. However, it was one of the countries globally which had encountered stagnated vaccination coverage in the past decades before the COVID-19 pandemic. The services interruption and vaccine hesitancy among the parents and caregivers due to the COVID-19 pandemic resulted in significant number of eligible children being unvaccinated and or under vaccinated. This has further deteriorated by the high burden on the health systems to deliver COVID-19 vaccine among the 234.7 million target population. Many health workers reported a high workload with poor motivation due to various reasons¹. The pulse survey highlighted that health facilities reduced the frequency of vaccination sessions to cope with their high workload and other priorities. On the other hand, most health facilities and vaccine storage points at various supply chain levels experienced significant stock out of several routine vaccines². Many children could not receive vaccines due to the closure of schools. All these issues unveiled the reasons for the high number of zero-dose children in Indonesia.

Indonesia made significant progress during 2022 to catch up missed children due to the implementation of the National Children Immunization Month (BIAN) catch up campaign implemented during May-Oct 2022. However, due to pockets of missed children and inequitable immunization coverage, the country remains high-risk for Polio, Measles-Rubella, and other vaccine preventable disease outbreaks. During Nov 2022 and Feb 2023, an outbreak of circulating Vaccine Derived Polio Virus type2 (cVDV2) with a total of 4 incidence of cVDPV2 cases reported in Acute Flaccid Paralysis (3 from Aceh and one case from West Java), and 11 cases of cVDPV2 reported in healthy children (4 from Aceh and 7 cases from West Java) occurred. Moreover, according to the latest monthly surveillance bulletin released on 16 Oct 2023, increased incidence of suspected Measles outbreaks, and diphtheria cases are reported in 2023 versus 2020-2022³.

Despite significant progress in the COVID-19 vaccination program, vaccination coverage among several target age groups remains low, inequity in vaccination coverage is apparent especially among the elderly group, increased number of zero dose and under vaccinated children, along with the issues reported with the immunization supply chain and vaccine management.

Based on the request letter from Ministry of Health through letter# IM.01.01/C.IV/ 1315 /2023 dated 31st March 2023, UNICEF will provide support to the Ministry of Health to achieve its target to prevent and control transmission of vaccine preventable diseases (VPD). In this recovery time from the COVID-19 Pandemic, UNICEF will provide: 1) Technical support at national level, provincial and district level focusing on 10 priority provinces both on program delivery and also in demand aspects including people's perception on routine immunization; 2) Facilitate unpacking of the communication strategy to reach zero dose children and respond to VPD outbreaks (including outbreak response immunization) in all affected provinces or districts; 3) Support routine analysis of cold chain capacity adequacy as well as cold chain management training; 4) Increasing demand for immunization through involvement of influencer/champion as immunization ambassador. The high priority provinces include Aceh, North Sumatera, West Sumatera, Riau, West Java, East Java, Central Sulawesi, East Kalimantan, NTT, and Papua.

This TOR is part of UNICEF support to provide technical assistance by appointing 4 individual consultants based in Jakarta, Bandung, Surabaya, and Makassar to cover six provinces out of ten priority provinces. Four remaining focus provinces will also be covered through UNICEF staff in the respective field offices and EPI team in Jakarta. Knowing the challenges, the Gol has requested UNICEF to intensify the technical assistance to strengthen the routine immunization, support the introduction and scale-up of several new and underutilized vaccines, support on capacity building on immunization supply chain, facilitate unpacking of the immunization communication strategy, increase demand through engagement with local influencers, religious scholars, and community leaders. The consultancy is approved by the Deputy Representative Program and will be included in the Technical Assistant Plan for 2024.

Scope of Work:

The Immunization consultant will provide technical support, advocacy and facilitate the required support to the provincial and district levels, including provision of technical assistance to program strategy development (planning, budgeting, and implementation); support developing micro planning to determine the accurate denominator for targeted children <5 years using socio-economic register, focusing on zero dose children, established linkages between vital statistics birth registrations in ECD centres and Puskesmas, decentralized advocacy and communication efforts with provincial governors, and Bupatis as part of a wider Routine Immunization and RCCE agenda, and support respective local authorities to implement the immunization plan with high quality, monitoring progress and providing feedback in selected provinces.

The GOI has requested UNICEF's support in high priority provinces with increased number of zero dose and under immunized children across several critical areas:

- Conduct advocacy and provide technical support at provincial and district level focusing on both supply, program delivery and demand generation for routine immunization.
- 2) Develop local actions plan for strategic support to the routine immunization programs in targeted provinces.
- 3) **Support, facilitate** and provide **technical assistance** for unpacking the national immunization **communication** strategy to respond to vaccine hesitancy and zero dose community in all affected provinces/districts
- 4) Support routine analysis of cold chain capacity adequacy as well as cold chain management training.
- 5) Demand generation: Increasing demand for immunization through engagement of local influencer/champion as immunization ambassador.
- 6) **Support micro planning** and all relevant efforts for establishing correct denominator.
- 7) Provide strategic advice and course corrective actions, including adaptation of national routine immunization tools/guidelines to ensure the quality of immunization supply chain and vaccines demand.
- 8) Collaborate with other UNICEF sectors at sub national level, particularly education and child protection team, to ensure integration of routine immunization program plan with other sectors.
- Provide appropriate technical support on advocacy and socio mobilization coordination activities. 9)
- 10) Final report (in narrative and ppt) with recommendation and lessons learned. Summarize the best practice, strategies and methods for reaching zero dose children and the utilization of new vaccines to strengthen routine immunization programme.

The consultants will be based in Makassar with frequent field travels to Central Sulawesi and East Kalimantan. Supervisor: Health Specialist from Start Date: End Date: Makassar Field office with technical guidance from Immunization Specialist in 01 May 2024 30 April 2025 Health Section in Jakarta. Work Assignment Overview Estim ate Tasks/Milestone **Deliverables/Outputs** Timeline Budge t Conduct a situation analysis of zero dose Report on zero dose and under immunization children and under immunize children, root causes, from Central Sulawesi and East Kalimantan Provinces barrier to immunization, gender, and conducted and report submitted from 2019 – 2022.
