Purpose of the Assignment:

The impacts of climate change are strongly exacerbating the already limited access to WASH services in Zambia. Climate change is causing more consecutive dry days, higher temperatures, and intense rainfall events. Heavy rainfall causes flooding and landslides that damage water sources, cause pit latrines to collapse, and carry runoff from sanitation facilities into drinking water. Heavy rains also oftentimes lead to soil erosion, resulting in sedimentation of water bodies and reducing their storage capacity. Rising temperatures increase the ability of pathogens to survive in water, thus causing a rise in waterborne disease, such as cholera¹ and causing water tanks to age more quickly. Drought is causing water points to dry up. Women and girls, who often carry the burden of fetching water, must travel farther when water sources are damaged from floods or dry up because of drought. This chore keeps girls from attending school consistently and risks loss of quality education. Education and learning expand the adaptive capacity of individuals and communities and have transformative effects in reducing vulnerability to climate change².

To reduce the social and economic impacts of climate variability, water and sanitation infrastructure needs to be adapted to withstand the climate-induced flooding that damages toilets and causes faecal matter to contaminate drinking water. The country also needs to adapt its WASH services to make them more drought resilient.

According to AfDB³, Zambia's overall need for climate financing currently stands at an estimated US\$50 billion through 2030. Unfortunately, Zambia is significantly affected by debt burden and has limited access to additional finance. The Zambian water and sanitation budget in 2022 had a nominal increase of 9 percent, up from K2.2 billion allocated in 2021. Yet, despite these efforts, the proportion of the population accessing climate resilient, inclusive, and sustainable WASH services in Zambia is lower than for most of Southern African Development Community (SADC) countries and lower middle-income countries globally.⁴ In real terms, Zambia's WASH spending has been on the decline over the last two years. Meanwhile, the system struggles with ongoing challenges due to large amounts of non-revenue water, low tariffs, high energy costs, and staffing issues, while most commercial utilities in the country are struggling financially and few are credit-worthy enough to maintain aging infrastructure, let alone expand to less profitable rural areas.

In order to mobilize resource to address climate adaptation needs in country, UNICEF in Zambia has submitted a concept note in response to call for applications launched by the African Development Bank in December 2023 to promote climate change adaptation, build resilience to climate change impacts, and strengthen the adaptive capacity of ecological, social, or economic systems and policy processes in response to climate change.

The project proposed by UNICEF focuses on:

- Improving climate-resilient household sanitation and hygiene
- Enhancing climate-resilient institutional WASH and Water Resource Management (WRM) by supporting institutions to develop evidence-based action plans for WASH, WRM, and climate upgrades in public places, such as schools and healthcare facilities
- Strengthening the capacity of national and sub-national authorities in budgeting, planning, and monitoring climate-resilient projects in a participatory and inclusive manner
- Enhancing the ability of public authorities to mobilize resources through innovative, blended, and green financing mechanisms
- Strengthening women's and youth's understanding of climate change impacts by improving their participation and engagement in climate-resilient WASH and water resource management activities

The proposed project is aligned with a US\$13 million programme currently under development by AfDB and US \$20 million European Union (EU) Program. The planned AfDB project aims to develop climate-resilient water and sanitation infrastructure in Kabwe, the capital of Central Province. UNICEF's efforts will help the Central Province commercial water utility, Lukanga Water Supply and Sanitation Company (LgWSSC), to improve their performance by fulfilling their rural mandate, particularly among women, children, and youth.

The overall outcome of this consultancy will be to develop the project appraisal report (detailed project proposal) to be submitted to the Bank's Board of Directors for review and approval. The report will be based on the concept note designed by the UNICEF team and should be in line with criteria and templates provided by AfDB. The report should be developed in consultation with the Ministry of Water Development and Sanitation, Local Authorities, the Commercial Utility, UNICEF, and AfDB local counterparts.

Scope of Work: In order to develop the project appraisal report (detailed project proposal), the following tasks should be undertaken by the hired consultant:

- 1. Review key reports and documents provided by UNICEF team including but not limited to EU NEWZA program documents, UNICEF WASH Budget Briefs, Zambia's National Adaptation Programme of Action (2007), the National Climate Change Response Strategy (2010), the National Policy on Climate Change (2016), the Nationally Determined Contribution (NDC; revised in 2021), AFDB Ten-Year Strategy, the High 5 Priorities, AfDB Climate Change & Green Growth Policy, the, Project Appraisal Report for the project 'Improving Access and strengthening innovations for WASHE in Kabwe and Bauleni Townships' and AfDB's Country Strategy Paper with the Government of Zambia.
- 2. Review the AfDB Climate Action Window Concept Note prepared by UNICEF team and validate the technical approach to provide services to beneficiaries from the proposed water and sanitation interventions.
- 3. Lead consultation with key partners and AfDB counterparts in Zambia
- 4. Review the proposed approach and scope of the project.
- 5. Discuss and agree on implementation schedule based on the scope.
- 6. Review and agree on the institutional arrangements to facilitate project implementation complete the assessment of existing capacities of the executing and implementing agencies.
- 7. Agree and confirm the outputs, results, and potential impacts of the project.
- 8. Conduct field visits and make consultations with the potential beneficiary communities on their specific roles in the project and their expectations from the project.
- 9. Assess and confirm the specific climate vulnerabilities of the local population (including for women and youth).
- 10. Climate Change Adaptation: Review and assess Climate Change effects and possible adaptation measures.
- 11. Present each deliverable to stakeholders in person or in online workshop before submission.
- 12. Revise and strengthen the Theory of Change by providing necessary justification based on evidence from desk review assessment and inputs from AfDB and other key partners.
- 13. Secure alignment between activities proposed and key Commercial Utility, MWDS, local authorities, and AfDB programs and confirm the measurable indicators linked to ensuring development effectiveness and achievement of the SDG related to water supply and sanitation, with special emphasis on climate change, poverty reduction and gender.
- 14. Drive the consolidation of the final proposal and relative annexes securing the inclusion of UNICEF, MWDS, Commercial Utility, local authorities, and AfDB inputs.
